

Amendments to the Claims:

1. (Currently amended) A computer-implemented system for providing event information comprising:

event information obtaining means ~~being capable of~~ for obtaining content, including at least one of an audio and video recording, of at least one event which takes place ~~information in an event place,~~ and for obtaining accompanying information regarding the at least one event;

means, responsive to the event information obtaining means, for posting the accompanying information regarding the at least one event on a web page;

request information receiving means for receiving a request for at least one event ~~the information content from which an information user via a web browser requests to obtain in the event place;~~ and

event information providing means for, in response to the ~~a~~ request from the information user received by the request information receiving means, providing ~~one or a plurality of event information among the information~~ the content obtained by the event information obtaining means to the information user via the web browser and through a signal transmission path.

2. (Currently amended) A method for providing event information comprising:

an event information obtaining step of obtaining content, including at least one of an audio and video recording, of at least one event which takes place ~~information~~ in an event place, and for obtaining accompanying information regarding the at least one event;

a posting step, responsive to the event information obtaining step, for posting the accompanying information regarding the at least one event on a web page;

a request information receiving step of receiving a request for the content from at least one event information which an information user via a web browser requests to obtain in the event place; and

an event information providing step of, in response to the a request from the information user received in the request information receiving step, providing the content one or a plurality of event information among the information obtained by the event information obtaining step means to the information user via the web browser and through a signal transmission path.

3. (Currently amended) A computer-implemented system for providing event information comprising:

means for posting, on a web page, accompanying information regarding at least one event which is scheduled to take place in an event place;

request requested-information receiving means for receiving at least one request for content, including at least one of an audio and video recording, of the at least one event, from event information which at least one an information user via a web browser requests to obtain in an event place;

event information obtaining means for, in response to a reception result of the request information receiving means, obtaining the requested content in the event place event information according to the a request from the information user in the event place; and

event information providing means for providing the event information content obtained by the event information obtaining means to the information user via the web browser and through a signal transmission path.

4. (Currently amended) A method for providing event information comprising:

a posting step for posting, on a web page, accompanying information regarding at least one event which is scheduled to take place in an event place;

a request information receiving step of receiving at least one request for content, including at least one of an audio and video recording, of the at least one event, from at least one event information which an information user via a web browser requests to obtain in an event place;

an event information obtaining step of, in response to a reception result of the request information receiving step, obtaining the requested content in the event place event information according to the a request from the information user in the event place; and

an event information providing step of providing the content event information obtained in the event information obtaining step to the information user via the web browser and through a signal transmission path.

5. (Currently amended) A computer-implemented system for providing event information comprising:

information acquiring means for acquiring information, including at least a subject and date, regarding a plurality of events which take place in event places information;

means for posting, on a web page, the information regarding the plurality of events; and

information delivering means for delivering, to a user, via a web browser, -the information regarding a selected one of the plurality of events, which the a user selects, via the web browser, from among the plurality of information regarding the plurality of events obtained by the information acquiring means, to the user.

6. (Currently amended) A computer-implemented system for providing event information comprising:

information acquiring means for acquiring information, including at least a subject and date, regarding a plurality of events which take place in event places information;

means for posting, on a web page, the information regarding the plurality of events;

desire receiving means for receiving a ~~desire~~ desired selection of a user to obtain the information regarding a selected one of the plurality of events, wherein the user indicates the desired selection via a web browser; and

information delivering means for delivering-, to the user, via the web browser, the information regarding the selected one of the plurality of events, responsive ~~which is related to~~ the user's desired selection received by the desire receiving means, ~~to the user.~~

7. (Currently amended) The computer-implemented system for providing event information according to Claim 6, wherein the information regarding the selected one of the plurality of events includes information acquired on the basis of the desired selection ~~desire~~ received from the user before the opening of the selected one of the plurality of events ~~an event~~ and information acquired on the basis of ~~the~~ a judgment of a content provider of the selected one of the plurality of events.

8. (Currently amended) The computer-implemented system for providing event information according to Claim 6, further comprising user desire acquiring means for receiving a desire of acquisition from the user before the opening of the selected one of the plurality of events ~~an event~~.

9. (Currently amended) The computer-implemented system for providing event information according to Claim 6, further comprising disclosure information selecting means for being capable of selecting information the user desires to disclose.

10. (Currently amended) The computer-implemented system for providing event information according to Claim 6, wherein the information relates to at least a subject and date of the selected one of the plurality of events ~~an event~~.

11. (Currently amended) The computer-implemented system for providing event information according to Claim 6, wherein the information is concerned with medical treatments.

12. (Currently amended) The computer-implemented system for providing event information according to Claim 7, wherein the selected one of the plurality of events ~~event~~ relates to a lecture meeting, an academic meeting, or an exposition.

13. (Currently amended) A computer-implemented method for providing event information comprising:

an information acquiring step of acquiring a plurality of information, including at least a subject and date, regarding a plurality of events which take place in event places;

a posting step for posting, on a web page, the information regarding the plurality of events; and

an information delivering step of delivering, to a user, via a web browser, the information regarding a selected one of the plurality of events, which the a user selects, via the web browser, from among the ~~plurality of~~ information regarding the plurality of events acquired in the information acquiring step, ~~to the user.~~

14. (Currently amended) A computer-implemented method for providing event information comprising:

an information acquiring step of acquiring ~~a plurality of information, including at least a subject and date, regarding a plurality of events which take place in event places;~~

a posting step for posting, on a web page, the information regarding the plurality of events;

a desire receiving step of receiving a ~~desire~~ desired selection of a user to obtain the information regarding a selected one of the plurality of events, wherein the user indicates the desired selection via a web browser; and

an information delivering step of delivering, to the user, via the web browser, the information regarding the selected one of the plurality of events, responsive ~~which is related to the user's desired selection received in the desire receiving step, to the user.~~

15. (Currently amended) The computer-implemented ~~event information providing~~ method according to Claim 14, wherein the information regarding the selected one of the plurality of events includes information acquired on the basis of the desired selection ~~desire~~ received from the user before the opening of the selected one of the plurality of events ~~an event~~ and information acquired on the basis of a the judgment of a content provider of the selected one of the plurality of events.

16. (Currently amended) The computer-implemented ~~event information providing~~ method according to Claim 14, further comprising a user desire acquiring step of receiving a desire of acquisition from the user before the opening of the selected one of the plurality of events ~~an event~~.

17. (Currently amended) The computer-implemented event information providing method according to Claim 14, further comprising a disclosure information selecting step ~~being~~ capable of selecting information which the user desires to disclose.

18. (Currently amended) The computer-implemented event information providing method according to claim 14, wherein the information relates to at least a subject and date of the selected one of the plurality of events ~~an event~~.

19. (Currently amended) The computer-implemented event information providing method according to Claim 14, wherein the information is concerned with medical treatments.

20. (Currently amended) The computer-implemented event information providing method according to Claim 15, wherein the selected one of the plurality of events ~~event~~ relates to a lecture meeting, an academic meeting, or an exposition.
